BREMBO PRESENTS THE NEW *M4.32* RADIAL CALIPER

New monoblock included in the range of calipers offered by Brembo

The new *M4.32* radial caliper has been added to the range of monoblock calipers with 100 mm spacing, designed and manufactured by Brembo.

Thanks to the latest Brembo casting technologies, the *M4.32* combines lightweight construction with levels of stiffness able to meet the kind of modulability and operating comfort demanded by endurance applications.

In designing this new caliper, special attention was given to aspects of servicing, with the result that the pads can be replaced without removing the caliper from the fork mount. In addition to this time-saving feature, error-proof assembly ensures that the pads cannot be fitted incorrectly, whether by accident or design.

This new caliper has been developed for the OE market and is intended for use on big tourer and road-going enduro bikes. Of the models exhibited at EICMA 2012, the *M4.32* monoblock caliper was fitted to the BMW GS 1200, Can-Am Spyder and Ducati Hypermotard, among others.

This now brings to 6 the number of radial calipers made by Brembo: 2 are conventional calipers using 4 or 2 pads, whilst the other 4 are monoblock components machined from aluminium casting.
