

BREMBO INTRODUCES NEW SPORT | TY3 BRAKE DISC

Featuring the new Type3 slotting and Brembo logo engraved on the disc

Stezzano (Bergamo), March 11, 2021 - Brembo, world leader in the design and production of brake systems for the automotive industry, is proud to introduce its new Brembo Sport | TY3 brake disc, dedicated to enthusiasts who want to modify their own car for sportier use and in search of a unique, more decisive look. This new product's mission is to deliver performance, functionality and distinctiveness to everyone.

The new Brembo Sport | TY3 disc is a direct replacement for original equipment discs and has two easily recognizable elements that distinguish it from the previous version - the use of Type3 slotting and the Brembo logo engraved on the braking surface. These new technical and design features are a first for a road disc.

The Type3 slotting is the result of years of research and development conducted by the Brembo Racing Department and resembles the design of the discs used in the most competitive motorsports championships. This slot design has been widely used in most GT and endurance championships such as the 24 Hours of Le Mans and is currently used in the WTCR World Championship.

The specific design of the slot on the brake ring enables constant cleaning of the pads' surface which increases friction, improves performance and brake modulability resulting in more responsive and consistent braking.

Compared with an original equipment disc, the new Brembo Sport | TY3 guarantees smoother brake pedal feel, improved performance, stability and resistance to fading - a trait that is much appreciated by those who love sportier driving.

The sporty nature of the Sport | TY3 disc is highlighted by the Brembo logo signature directly on the brake ring, a detail previously found only on discs used in racing applications. This enables immediate recognition of the high quality and the aesthetic refinement which have always been a hallmark of Brembo products.

The new Brembo Sport | TY3 disc also guarantees the best performance when combined with the other components in the Sport range. The Sport | HP2000 brake pad and the Sport | Evo500++ brake fluid, distinguishable by their silver-colored packaging.
